LEARN FROM A LEGEND OF REMOVABLE DENTISTRY

- Achieving balanced occlusion in centric relation
- Delivery of a treatment denture, and generating perfect functional impressions
- Lingualized occlusion as well as when to use cross bite
- Finalization procedures to go from the treatment denture to the final denture that require few if no post insertion adjustments
- Treating Class I, II and III cases using the same basic principles

COURSE OBJECTIVES

1. Arrange maxillary and mandibular teeth esthetically using anatomical harmony and phonetics with no chance of restriction of the anterior envelope of function.
2. Occlusal refinement using a central bearing point and functional analysis of the envelope of function.
3. Use of the treatment denture, and how to use it to make a surgical stent if implants are part of the treatment options.
4. Why sometimes the use of plastic teeth can cause problems for the patient in the future.
5. Basic partial denture design principles. Keeping attachments simple. Post insertion reline of the free end saddle partial to assure success.

MORE ABOUT DR. TURBYFILL

Dr. Turbyfill graduated from the University of Louisville in 1959. He studied with Dr. Earl Pound for many years and this relationship is responsible for his keen interest in prosthodontics. He is a member of the American Academy of Esthetic Dentistry, the American Academy of Restorative Dentistry and the American Academy of Prosthodontics to name a few professional organizations. He teaches and lectures throughout the world on the principles of complete dentures and removable prosthodontics. He maintains a private practice in restorative dentistry.

"...as I go around the country teaching other dentists how to manage the complete denture patient, I see myself in most of them as I was twenty years ago. Complete denture treatment is becoming a lost art! However, because of the interest in implant dentistry, there is a renewed interest in dentures!"
